

TJ Hammond Transport Ltd Environmental Policy

Environmental protection and management are an integral part of TJ Hammond Transport Limited's Operations. The company takes its share of responsibility for preserving the environment and for following the principles of sustainable development.

1. TJ Hammond Transport Ltd aims to improve all operations with a view to preserving biodiversity, recognition and protection to all its employees.
2. Reduction of detrimental environmental impacts and the control of emissions into the soil, water, the aquatic ecology and the air.
3. Materials, which are considered of a hazardous nature to the employee, public or the environment shall be avoided, but, where their use is deemed necessary use shall be minimised. However, wherever possible such materials shall be replaced by alternative materials of an environmentally friendly nature.
4. We will maintain our fleet to optimum efficiency and reliability and to replace vehicles which are beyond efficient and environmental repair and to have speed inhibitors fitted on all our large vehicles to maintain fuel economy. All consumable vehicle parts are fully re-cyclable or bio-degradable.
5. All vehicle emissions, energy, water and noise are monitored to limit our environmental impact through our continued improvement policy.
6. Through smart telematics we monitor driver behaviour and spot opportunities for more fuel-efficient driving performance such as engine idling, harsh braking and excessive acceleration, all of which contribute to lower miles per gallon rate.
7. At TJ Hammond Transport Ltd we are continually investing in new improved Euro 6 vehicles, anti-engine idling systems, ad-blue and the latest green technology to reduce our carbon impact and help protect the environment.
